

✓ Crew ai install and python

have installed Crew AI on Windows. The current Python version is 3.11, which I installed and ran as an administrator, and received a success message. After that, I checked the Crew AI environment version, ran the activation command, installed Crew AI using pip install crewai, and verified the installed packages using pip show. I also rechecked the Python

version to confirm everything.version

```
C:\python>python -m venv crew-ai-env
C:\python>crew-ai-env\Scripts\activate

crew-ai-env E:\python>pip install crew
